# SPOTLIGHT

#### **ROEKO** Comprecap

10

AND AN ONLY

ROEKO Comprecap compression caps stop bleeding naturally by compression and control the moisture around the tooth stump.

#### **ROEKO Comprecap / Comprecap anatomic**

530000

530000

ROEKO Comprecap compression caps stop bleeding naturally by compression and control the moisture. The use is simple and supports impression preparation regardless of the retraction technique. ROEKO Comprecap anatomic are formed compression caps with semicircled shaped spaces on two opposite sides and can therefore be easily placed on adjacent teeth.

| REF    | Item                     |

| 521002 | Non-Impregnated, Medium, 1 pcs |
| 521003 | Non-Impregnated, Thick, 1 pcs  |

#### **Retraction Accessories**

Double ended, stainless steel instruments facilitate placing of retraction cord around the tooth.

- Serrated or smooth edges
- Structured handle
- Ergonomically designed to work around the tooth
- The balanced notches hold the cord in place
- Sterilizable

520000

**PRESIDENT** The Original

#### **AFFINIS®**

18

AFFINIS is COLTENEs premium A-Silicone for dental impressions. Apart from the ideal working and setting time, AFFINIS convinces dentists with a high dimensional stability and accuracy. The extraordinary surfactant system results in outstanding flow properties for greater detail reproduction. The introduction of PRESIDENT in 1975 – the first A-Silicone in the market – is considered a milestone in the development of high-precision dental impression materials. On the occasion of the 40th anniversary of PRESIDENT, the first A-Silicone line has been relaunched under the new brand name PRESIDENT The Original with improved characteristics.

### **AFFINIS**<sup>®</sup>

#### Perfect Impressions

A perfect AFFINIS impression is the key for accurately fitting, laboratory fabricated restorations. It provides the ideal basis for successful teamwork between the dentist and the dental technician.

- Innovative surface affinity
- Optimised flow properties
- Excellent thixotropy and the self-contouring consistency
- Outstanding model fabrication
- Autoclavable

#### **AFFINIS light body**

AFFINIS wash materials wet the tooth and gingiva extremely quick and effective. Its distinct surface affinity and flowability virtually eliminates the risk of air voids and distortions.

- Low contact angle
- Excellent flow properties in a moist environment

#### **AFFINIS regular body**

6511

AFFINIS wash materials wet the tooth and gingiva extremely quickly and effectively. Its hydrocolloid-like property ensures that the wash material flows into the narrowest areas without applying pressure. Beside the low contact angle thanks to its structure-breaking property of the surfactant agent, AFFINIS regular body provides a medium wash consistency, an adequate stability and does not drip from the tooth.

#### **AFFINIS fast regular body**

6611

#### **AFFINIS PRECIOUS**

6775

Beside the low contact angle thanks to its structure-breaking property of the surfactant agent, AFFINIS fast regular body provides a medium wash consistency, an adequate stability and sets extremely fast.

| REF  | ltem             |                      |
|------|------------------|----------------------|
| 6611 | Refill           |                      |
|      | $2 \times 50$ ml | Cartridge            |
|      |                  | Universal Mixing Tip |
| 6682 | Refill, 20 ×     | < 50 ml              |

AFFINIS PRECIOUS polyvinylsiloxane (PVS) wash materials have a contact angle of only 10°. Its superior flow properties allow the impression material to easily capture all critical surface details of the preparations in a wet environment.

The unique silver and gold pigmentation drastically reduces the light scattering effect, thus improving the visibility of the margins.

#### Thermo-reactive formula leaves you in control of the total setting time

AFFINIS PRECIOUS wash materials have a variable working time from 5 to 60 seconds. The variable working time is possible due to the thermo-reactive formula that has an accelerated setting after the tray has been seated and the material has reached its final film thickness. This allows the total impression setting time to be in direct relationship to the number of preparations included in the impression. The fewer preparations you have, the less total setting time you need.

#### **AFFINIS MonoBody**

AFFINIS MonoBody is tissue friendly and neutral in taste without side effects or patient discomfort. After a short oral setting time of 2:30 min the AFFINIS impression can be easily removed without residue or distortion.

AFFINIS MonoBody can also be used as the tray material for the one-step putty/wash technique.

#### **AFFINIS System 360 putty**

6471

AFFINIS System 360 putty has a strong "firm body" which is immediately noticebale once dispensed from the mixing unit with no signs of stickiness. The dentist is comforted with a reliable, automatically-mixed putty material for successful precision impressions.

- Putty available in cartridge
- Prevents distortions in the impression caused by saliva and blood residue.

PROSTHETICS

#### AFFINIS putty soft / fast

6530

AFFINIS putty soft is a standard putty in the AFFINIS putty range. The compatible consistencies of the base and catalyst ensure for quick and easy mixing.

- Easy mixing consistency
- Prevents distortions in the impression caused by saliva and blood residue.

| REF  | ltem       |              |

## **PRESIDENT** The Original

#### A small step for dentists. A great step for dentistry.

The introduction of PRESIDENT in 1975 – the first A-Silicone in the market – is considered a milestone in the development of high-precision dental impression materials. Through continuous development, the PRESIDENT brand continues to impress with its remarkable quality.

The new, high pigmented colours of the PRESIDENT the Original line provide better contrast and show every detail, even before the impression is poured. All consistencies offer excellent flow properties in a moist environment.

- High tear strength and elasticity
- Optimised flowing behavior and thixotropy
- Easier-to-mix putties
- New and more contrasting colours
- New consistencies

#### PRESIDENT The Original Xtra light body

60019937

PRESIDENT the Original Xtra Light Body is a light-flowing material that can easily capture even the smallest marginal details.

Impression C-Silicone

# SPOTLIGHT

# REF 4980 COLTENE Free 119 ht bo Universal Activator Pecder 田本中(( light body surface activated W COL Speedex 30

Speedex is a C-Silicone with A-Silicone qualities. Speedex has an elastic recoverability and reproduction, which is otherwise only achieved by A-Silicones. As a result of the low shrinkage, impressions remain dimensionally stable and can be cast for up to 7 days without problems.

### Speedex

#### Bites of passion

Speedex has elastic recoverability and reproduction, which is otherwise only achieved by A-Silicones. As a result of the low shrinkage, impressions remain dimensionally stable and can be cast for up to 7 days without problems. Furthermore this premium C-Silicone shows an outstanding wettability and excellent flow characteristics. Saliva and blood are displaced by Speedex medium and have no negative side effects.

The Speedex system gives the advantage to work with only one activator for 4 consistencies.

#### Speedex light body

4980

The Speedex system gives the advantage to work with only one activator for 4 consistencies. Moreover, Speedex offers physical properties that approximate to those of addition cured silicones - polyvinylsiloxanes:

- 7 days dimension stability
- Controllable working time
- Surface active
- Moisture control
- Optimized precision

#### Speedex medium

4986

Speedex medium has outstanding wettability and excellent flow characteristics. Saliva and blood are displaced by Speedex medium and have no negative side effects. With the variable setting time of Speedex medium the important mucosal movements, which are necessary for the full and partial denture technique, can be taken very precisely. A perfect impression is the key for an accurate fitting denture.

# SPOTLIGHT

HydroPrint Premium is an alginate based Impression material. It is easy to mix and dust free. Its peppermint flavour and low viscosity make the experience more pleasant for patients.

#### HydroPrint Premium

HydroPrint Premium is suitable for anatomic impressions. Anatomic impressions have different indications. They are needed for study-, analysis-, planning- and working models. Important properties of the alginates are the flowability, detail reproduction, dimensional stability, elastic recovery and disinfection.

The outstanding elastic properties of HydroPrint Premium are characterized by the high tear strength of the material.

Prosthetics Accessories

## SPOTLIGHT

## Impression Trays

41

PRESIDENT Trays are single use plastic impression trays. A patented system of intersecting ribs and rails provides unprecedented rigidity in a plastic tray. The PRESIDENT Trays AC are also autoclavable.

Mixing Tips

Universal Mixing Tip - a universal mixer developed especially for all light and regular body materials as well as bite registration and gingival mask materials from COLTENE. The reduced extrusion force allows for a comfortable and accurate dispensing of material.

43

#### **COLTENE Adhesive**

4405

A thin layer of COLTENE Adhesive ensures adhesion of tray material to the tray sides.

#### **COLTENE Adhesive**

COLTENE Adhesive is a universal adhesive for silicone-based dental impression materials and serves as an adhesive bonding agent between the impression material and the impression tray. Separation of the impression material during removal from the mouth can therefore be prevented

#### **COLTENE Adhesive AC**

Coltène Adhesive is an autoclavable adhesive for all AFFINIS impression materials and serves as an adhesive bonding agent between this material and the PRESIDENT disposable impression trays AC. Separation of the impression material during removal from the mouth can therefore be prevented. The special spray nozzle provides application with a uniform, thin layer without becoming clogged. Coltène Adhesive AC was specially developed for the autoclavable system (AFFINIS impression materials, PRESIDENT disposable impression trays AC).

## **Impression Trays**

A patented system of intersecting ribs and rails provides unprecedented rigidity in a plastic tray. The anatomic form relieves the fitting and ensures a perfect impression. Autoclavable and non autoclavable.

- Anatomically correct: A statistical database accumulated over 20 years has enabled Coltène / Whaledent to define the ideal form for each tray system
- Built-in retention: The President Tray System's design aggressively retains all types of impression material.
- Transparent: Easy and precise positioning of the tray. •
- Modifiable form: The tray can individually be adjusted with heat.
- Single use: No risk of contamination, no time-consuming cleaning.

## **Mixing Tips**

6552

One new UNIVERSAL MIXING TIP - Always the right choice

Mixing Tips and Oral Tips for different wash and tray materials which ensure a homogenous ratio between base and catalyst.

With up to 55 % less extrusion force during the application of wash material the new UNIVER-SAL MIXING TIP ensures an easier work with dispensers.

- For all 50 ml cartridges from COLTENE
- For all COLTENE light and regular body, bite registration and gingival mask materials
- Simple and precise application due to reduced extrusion forces
- Practical, flexible and economical

## **Other Accessories**

Coltopress, the squeezing aid for tubes, empties tubes without waste.

COLTENE Mixing Spatula supports a consistent and homogeneous mixing.

The new COLTENE cutting knife is a universal version for both left- and right handed customers offering the following:

- New ergonomic design which perfectly fits to the size of the hand
- Special undercuts in the knife handle avoid slipping of fingers
- Sharp blade makes cutting easy and efficient
- New packaging and colour
- Autoclavable

# 7 Laboratory

## SPOTLIGHT

## **GI-MASK**

46

Lab putty

The silicone-based gingival mask for precise reproduction of gingival contours around the margins maintains its accuracy for days and right up to the moment until the restoration is finished.

Lab-Putty is the outstanding polysiloxane laboratory modelling

material with a 62 - 67 Shore A hardness. Ideal for model repairs, isolation, denture heat protection, keys, block outs and matrixes for the formation of general occlusion and functional guides.

49

## GI-MASK

#### No compromise in function and aesthetics

The silicone-based gingival mask for precise reproduction of gingival contours around the margins maintains its accuracy for days and right up to the moment until the restoration is finished.

The GI-MASK family consists of the classical C-Silicone handmix, the A-Silicones GI-MASK Automix New Formula and GI-MASK 3D in cartridges.

#### GI-MASK

The advantage of GI-MASK is the exclusive accessory system which offers accurate dispensing, neat mixing and simple application. Its short, time-saving setting time makes GI-Mask a unique aid for dental laboratories.

#### **GI-MASK Automix New Formula**

GI-MASK Automix New Formula provides accurate reproduction of soft tissue structure. The A-Silicone based gingival mask provides all information for implant supra-structures and frameworks. The aesthetic coloring of the gingival mask supports the clinical situation. It facilitates the preparation of esthetically excellent and perfectly functioning crown and bridge work. In addition it helps to prepare ideal conditions for periodontal hygiene.

#### GI-MASK 3D

GI-MASK 3D has very similar properties to GI-MASK Automix New Formula. In addition, the gingival mask material can be scanned without prior surface treatment.

## GI-Mask 3D

60022251

The scannable GI-MASK 3D allows digitising reproduced gingiva profiles in the preparation region without scan spray. The use of a gingival mask is particularly important in the fabrication of implant-supported supra-structures to achieve the best fit for dentures.

- Scannable without surface treatment
- Excellent flowability
- Extremely high elasticity and tear strength

## **GI-MASK Automix New Formula**

8060

A-Silicone GI-MASK Automix New Formula facilitates the preparation of esthetically excellent and perfectly functioning crown and bridge work. In addition it helps to prepare ideal conditions for periodontal hygiene.

It is particularly suitable for single crowns, bridges, implants, combination and telescopic work.

## **GI-MASK**

The GI-MASK is the C-Silicone based gingival mask. It has been conceived for the quick and accurate reconstruction of the complete contours of the gingiva around the preparation on the model. It is particularly suitable for:

- single crowns
- bridges
- implants
- combination and telescopic work

## Lab putty

COLTENEs Lab-Putty was especially designed for the use in laboratory. It can be used for model repairs, isolation, denture heat protection, keys, block outs and matrixes for formation of general occlusion and functional patterns. Lab-Putty hard is characterized by its high heat-resistance (300°C) and its high end hardness (90 Shore A).

## Lab putty / Lab putty hard

8805

8840

Lab-Putty is the outstanding polysiloxane laboratory modelling product material with 63 - 70 Shore A for model repairs, isolation and denture heat protection, keys and block outs and matrixes for formation of general occlusion and functional patterns.

A smooth acrylic surface is guaranteed with the use of Lab Putty hard for relining, keys and repair models. Separate isolation is eliminated. Its high heat-resistance (300° C) and perfect dimensional stability makes it suitable for soldering models (90 Shore A).

## ACCU-TRAC

The ACCU-TRAC system makes the fabrication of precision model and dies easier. It creats a precise base for your prosthodontic work. The model and base are poured as one, eliminating the additional work when using pins and sleeves. Time and material can be saved without sacrificing precision.

#### ACCU-TRAC°

ATK25

ATA20

The ACCU-TRAC<sup>®</sup> System makes the fabrication of precision models and dies easier: The model and base are poured as one, eliminating the additional work when using pins and sleeves. You save time and material, without sacrificing precision.

- One universal tray size, accomodates all maxillary and mandibular sizes, including quadrants
- Low base height, model fits any articulator
- One pour Technique saves time and materials
- Economical, all components reusable
- Numerical die location, immediate recognition of dies, easy die repositioning

## PINDEX

Uncompromising model and die precision which assures parallel channels for quick, easy and reliable pin placement. The laser drilling machine offers more accurate drill positioning for better die registration and the visible beam reduces eye fatigue. The focus-free laser outlasts conventional bulbs, and manual drilling to pre-set depth is possible.

## **PINDEX**<sup>®</sup>

The PINDEX System is considered to be the «benchmark» used in model making. It provides a simple way to fabricate precise parallel drill channels. Laser Drilling Machine- Assures parallel channels for quick, easy, and reliable pin placement.

- More accurate drill positioning for better die registration
- Visible beam in all lighting for reduced eye fatigue
- Focus-free laser outlasts conventional bulbs
- Manual drilling to pre-set depth System Accessories
- Durable, high quality carbide dril

## **HYGENIC** Waxes

#### Small details, big impact

The HYGENIC wax portfolio offers different wax sizes and shapes for various indications. Users can chose between bite wafers, u-shaped occlusal rim wax, square wax ropes, round wax strips, wax sticks which can be used for undercuts of individual trays, bite registration, bite plane appliances etc.

## HYGENIC yellow bite wax

Economical alternative to beeswax with many of the same characteristics.

## Laboratory Accessories

COLTENEs laboratory accessories are made for laboratory needs. The HYGENIC Flexibole® mixing bowls, as well as the nylon spatula are designed so that the mass to be mixed does not stick to them.

PROSTHETICS

## Laboratory Accessories

H00563

Plaster, stone, innvestments, and alginates will not stick to these self-cleaning Flexibole® mixing bowls or the nylon spatula. More flexible than rubber bowls for more efficient mixing. The high-quality trimmer for silicones is used to remove any excess gingival mask material during the restoration process.
