

NEW: for customized abutments

# now available: Forte with reinforced adhesion

Forte

## implantlink® semi

### semi-permanent cement for implant restorations

- **Forte** With reinforced adhesion and compressive strength for small abutments or abutments with reduced adhesion surface
- **Classic** Interlocking, masticatory-stable luting for standard abutments

- ultimate marginal gap sealing, dual curing
- residues can be effortlessly removed (large pieces, no crumbling)
- significantly lower displacement resistance than conventional cements

- extremely low layer thickness, only 8 µm for maximum fitting accuracy
- **Damage free removal even after longer wearing time!**
