

EM45

SurgiFlexo Tip

Flexible sterile aspirator tip suitable for surgical aspiration, especially for apicoectomies, gingival grafts and implantology operations with limited operating space. Ideal in hard-to-reach areas, such as in wisdom tooth operations. The possibility to flex the tube and unscrew the tip allows its adaptation to different aspiration needs during the various stages of the operation. Each aspirator tip is packed in a sterile medical blister with a double adhesive label to provide maximum traceability.

Each pack includes 20 aspirator tips and 2 adapters: one adapter from 6,5 mm to 11 mm, the other from 11 mm to 16 mm, providing universal compatibility. Product Made in Italy.

Classification

Medical Device Class IIa

Material

PVC, PP

Colour

Blue

Dimensions

18 cm

15.5 cm - without tip

Sterility

Guaranteed 5 years from date of sterilization

Packaging

20 pcs

Safe

The tube and tip are biocompatible and guarantee patient safety. In addition, the tip is designed to be gentle on the tissue.

Versatile

The unscrewing of the tip provides safety and versatility, prevents accidental removal and allows the suction opening to be varied from 2.6 mm to 4.8 mm, offering increased performance.

Precise

The built-in wire in the transparent tube ensures the right degree of rigidity and maintenance of the bending angle. The light blue colouring of the tip provides maximum contrast for better precision.
